

2006-2007

March Meeting Notice

Minnesota Geotechnical Society

“How to Read and Understand a Geotechnical Report”

Presented By: William C. Kwasny, PE – American Engineering Testing, Inc.

Civil engineers, structural engineers, architects, contractors, developers, and owners all use geotechnical information during the planning, design, construction, and maintenance of a facility. The experienced individual knows that a geotechnical reports contain much more information than just a soil bearing pressure. Mr. Bill Kwasny has over 30 years of experience as a geotechnical engineer and will present tips to help you be able to read the report, and understand all of it – not just the design bearing pressure! There are many subtle things to glean from a soil report, and the prudent user will develop his skills in this area. Not all geotechnical reports are created equal. Mr. Kwasny will discuss what should be included in both the request for proposal for a geotechnical report, as well as what a geotechnical report should include.

Date: Thursday, March 29, 2006
